**DELPHI**

Medical Systems Corporation

As intravenous infusion moves into exciting new areas of medicine, challenges come from all directions. Patients want a better quality of life. Medical professionals demand accurate, cost-effective systems that will help reduce medication errors. And treatment is moving into a variety of settings — each with its own set of requirements. Fortunately, Delphi Medical Systems can help you excel in this changing paradigm. Because the leading edge is where we live.

**Even our corporate structure  
is leading edge.**

Entrepreneurial. Reliable. Global. Local. Big. Agile. How often do you see all these words used to describe one company? That's the advantage of Delphi Medical Systems. We're an independent arm of Delphi Corporation, designed to be as responsive as a start-up, but with the vast resources of a FORTUNE 500® company.

In essence, we're a leading-edge medical breakthrough.

Our paradigm-changing resources include access to Delphi's impressive portfolio of electro-mechanical technologies. These are existing technologies, proven in rapidly evolving industries. And the possibilities don't stop there. Delphi Medical Systems is uniquely positioned to work with you as a committed, long-term strategic ally — in the manufacturing, co-developing or private-labeling of products.

Whatever type of infusion device you produce, whether you require custom components, sub-assemblies or complete product solutions — we can deliver for you, with unparalleled innovation and speed.

Imagine where such a strategic alliance could lead.

We'll help you build  
on opportunities.

From hospitals to homecare — a new generation of intravenous infusion devices is broadening market opportunities while improving patient satisfaction.

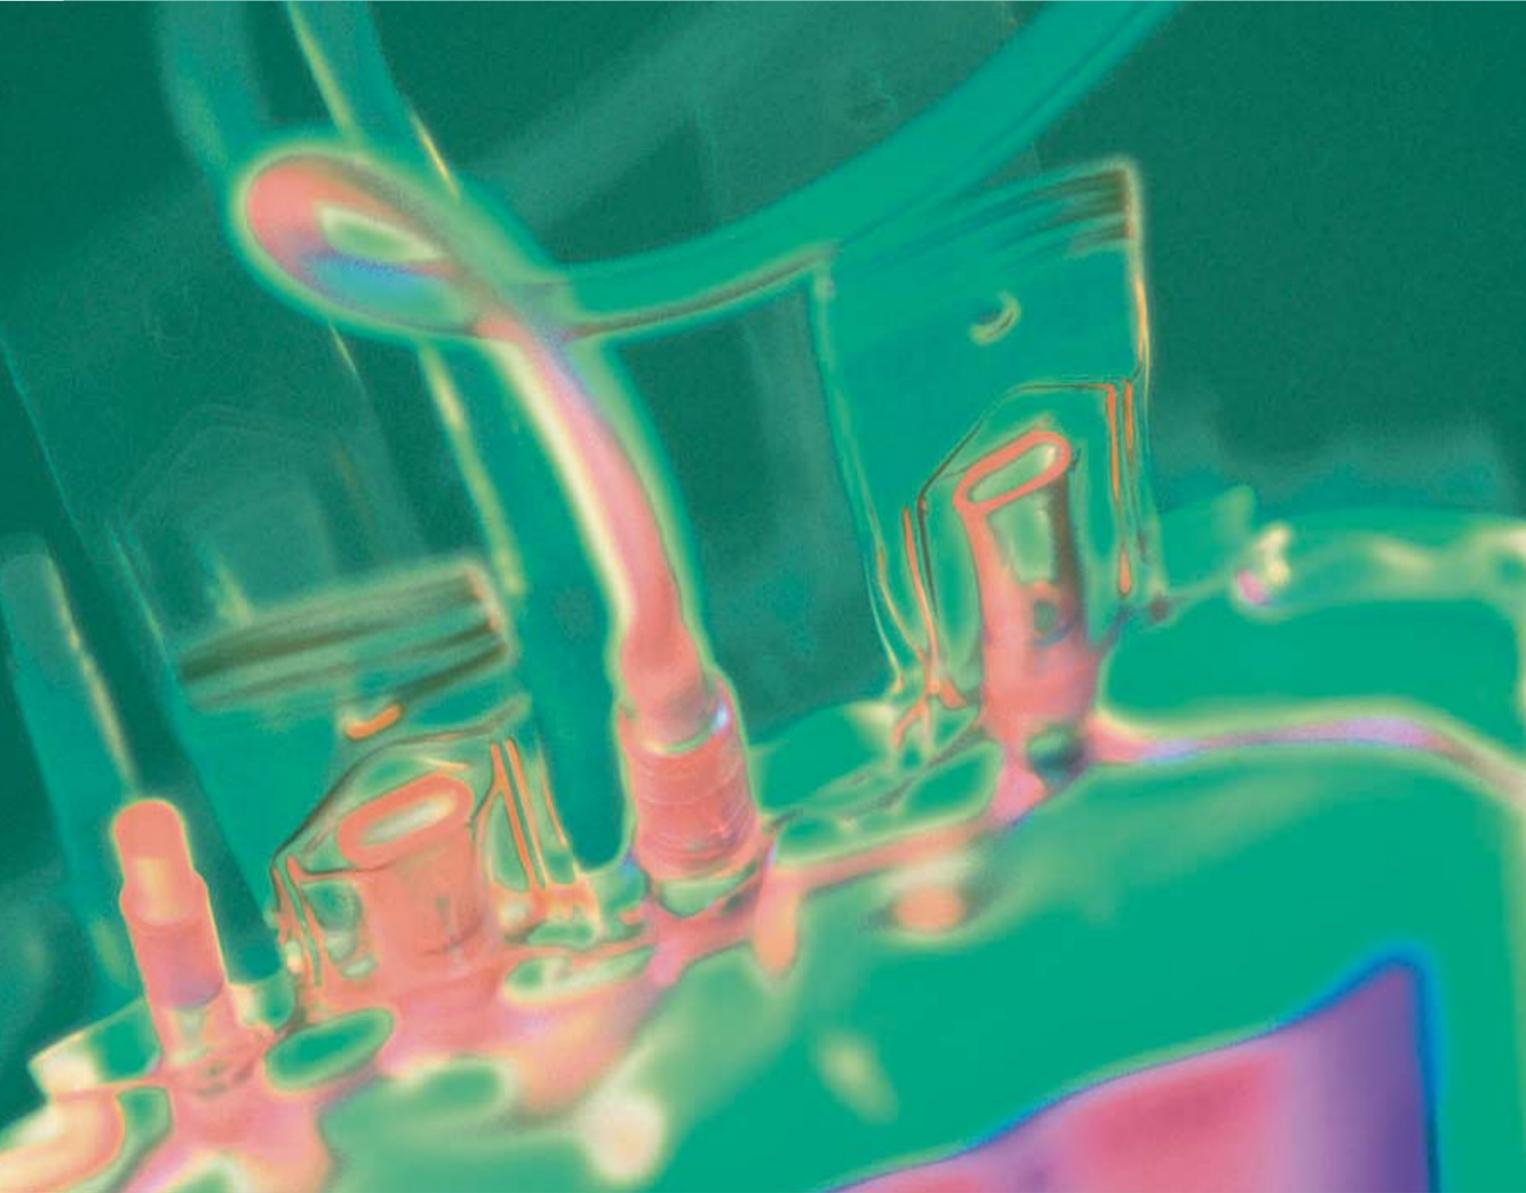

The potential for product innovation is great. And Delphi has the “technology building blocks” to help you realize this potential.

For decades, Delphi has supported major original equipment manufacturers with product and technology development, industrial design and ergonomics,

miniaturization and lean manufacturing. This complete and innovative approach can help translate into greater reliability and real cost reductions.

Our creativity, however, doesn't stop there. Delphi's product development disciplines produce, on average, two new patents every business day and over 350 product launches every two years. Now, Delphi Medical Systems would like to bring the same sort of vision to your projects.

**The shortest  
route to the  
leading edge.**

Delphi has the capabilities already in place to help keep you on the leading edge — of both traditional and non-traditional infusion therapies and uses. Some of Delphi's core competencies include:

- **Micro-Electro-Mechanical Systems (MEMS)**
  - Disposable pumps
  - Intelligent disposables
- **Power Management**
  - Power reduction
  - Advanced power sources
- **Wireless Communications**
  - Telemetry
  - Asset tracking
  - Remote monitoring, control and alarms
- **Electronic Controls**
  - Software algorithms
  - Closed-loop systems
  - Electronics and software integration
- **Bar-Coding Systems/Security Systems**
  - Accurate dosing control
  - Tamper-resistant
  - Fingerprint recognition
- **Sensor Technology**
  - Fluid management
  - Physical and chemical sensors
- **Human Interface**
  - World-class industrial and ergonomic product designs
  - Improved feature sets
  - Multiple display technologies
- **Molding Technology**
  - Low to high volume custom disposables, housings and intricate components
- **Connection Systems**
  - Can help increase reliability and improve serviceability

If we don't have the technology you need, we'll leverage Delphi's global purchasing network to search for it. If the technology is not readily available, we'll do our utmost to develop it. If it fits your strategies, we'll manage the manufacturing process and the human resources associated with it, removing the learning curve often associated with traditional outsourcing.

**Imagine how  
far we can go —  
together.**

Just imagine the many ways a truly collaborative, creative relationship can expand your potential. As we form alliances with medical equipment manufacturers and distributors, we look forward to far-reaching benefits — for our customers, for ourselves and, most importantly, for patients around the world. So where do you want to go next? Delphi Medical Systems is ready to help you turn your vision into reality.
